WILLY WORKS

How to measure your erection angle (For mold container selection):

1. Print this protractor on U.S. letter paper (do not resize).

2. While erect, place the flat edge of the paper along one side of the shaft, viewing from the side.

3. Note the approximate angle where the shaft points.

Angles do not need to be exact.

A close approximation is all that's required to select the correct mold container.
